

## OPTIMAL NUTRITION FOR HEALTHY ANIMALS

A sustainable  
natural ingredients  
with excellent  
functional  
properties for  
livestock

### Why insect-based food is the solution for livestock?

#### Nutritious

- Rich in protein with balanced amino acids profile
- Strengthen the immune system
- Highly digestible

#### Sustainable & Resource-Efficient

- Circular economy approach through 'upcycling' of nutrients
- Farmed with zero waste generated
- Low carbon footprint, less agricultural land & water usage

## Made of Black Soldier Fly

- Reliable & traceable source of protein
- Sustainably & consistently produced under controlled conditions
- Natural ingredients for livestock which limit the usage of antibiotics

## How to use?

Swine & Poultry recommended inclusion:

Up to 20% can be used in broiler diet formulations during the starter, grower & finisher periods.

# entomeal™ entolipid

## Insect-Based Functional Ingredients

For layer, breeder, broiler chickens & piglets , it improves:

### Growth Performance

Black soldier fly larvae ingredients increase growth rate & improve productivity particularly in closed-farm environments

### Nutrient Digestibility

Black soldier fly larvae ingredients contain nutrients that are highly digestible

### Gut health

Black soldier fly larvae ingredients contain antimicrobial peptides which have beneficial effects on intestinal health
